

DECORATIVE HARDWOOD MULCH

TECHNICAL DATA SHEET

PRODUCT DESCRIPTION

Gro-Bark's Decorative Hardwood Mulch is a blend of finely ground woody substrates and hardwood barks such as poplar and maple. Consisting of more than 65% bark fiber and less than 35% wood fiber, this mulch is a natural pale brown colour which turns a warm dark brown colour with age.

The economics of Decorative Hardwood Mulch make it an ideal product for mulching large-scale commercial plantings. As with other mulches, Decorative Hardwood Mulch increases soil moisture retention and root zone cooling, which minimizes frequent irrigation.

TYPICAL ANALYSIS

pH*:	6.5 – 8.0
Organic Matter Content:	~ 80% by weight (dry)
Minimum Size Gradation:	97% < 1", 66% < 5/8"
Moisture Content:	45 – 55%

APPLICATIONS

Decorative Hardwood Mulch can be used as mulch for a variety of plants including trees, shrubs and perennials. Due to its slow decomposition rate, Decorative Hardwood Mulch is best used in areas of your yard that do not require regular turning or tilling. The slow decomposition rate also provides long lasting weed suppression for garden beds or planters.
